According to our (Global Info Research) latest study, the global Autopilot Servos market size was valued at US\$ 1797 million in 2024 and is forecast to a readjusted size of USD 2671 million by 2031 with a CAGR of 5.7% during review period.

Autopilot servos are electromechanical devices used in an aircraft's autopilot system to control the movement of flight control surfaces such as the ailerons, elevators, and rudder. These servos receive commands from the autopilot computer and convert them into mechanical motion to adjust the aircraft's attitude and heading without manual input from the pilot. By continuously making small corrections based on sensor data, autopilot servos help maintain steady flight, execute programmed maneuvers, and reduce pilot workload, especially during long flights or complex navigation scenarios.
