Abstracts

An autoradiograph is an image on an x-ray film or nuclear emulsion produced by the pattern of decay emissions (e.g., beta particles or gamma rays) from a distribution of a radioactive substance. Autoradiography is the process of taking a type of picture, called an autoradiograph, which shows the relative concentration of radioactive material present within the subject. The subject is usually a biologic specimen or human body part. The photographic plate is exposed to radioactive emissions from the subject being studied, producing an image.
