Abstracts

The global Autoradiography Films market size is expected to reach \$ 135 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

An autoradiograph is an image on an x-ray film or nuclear emulsion produced by the pattern of decay emissions (e.g., beta particles or gamma rays) from a distribution of a radioactive substance. Autoradiography is the process of taking a type of picture, called an autoradiograph, which shows the relative concentration of radioactive material present within the subject. The subject is usually a biologic specimen or human body part. The photographic plate is exposed to radioactive emissions from the subject being studied, producing an image.

Global Autoradiography Films key players include Carestream, GE Healthcare, Fujifilm, Thermo Fisher Scientific, Santa Cruz Biotechnology etc. Global top five manufacturers hold a share over 70%.

North America is the largest market, with a share over 50%, followed by Europe and Asia-Pacific, both have a share over 40% percent.

In terms of product, Nuclear Emulsion is the largest segment, with a share over 80%. And in terms of application, the largest application is Blotting followed by Sequencing.
