## Abstracts

An Auxiliary Power Unit (APU) for aircraft is a self-contained power generation system installed onboard aircraft to provide electrical power, hydraulic power, and air conditioning while the main engines are shut down. APUs are essential for various aircraft operations, including starting the main engines, powering onboard systems, and maintaining cabin comfort during ground operations and in-flight.

According to our (Global Info Research) latest study, the global Auxiliary Power Unit for Aircraft market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

**Growing Aircraft Fleet:** The global fleet of commercial and military aircraft is expanding, driven by increasing air travel demand, fleet modernization initiatives by airlines, and military aviation requirements. This growth fuels the demand for APUs to support the electrical and hydraulic power needs of these aircraft.

**Rising Demand for Fuel Efficiency:** Airlines and aircraft operators are increasingly focused on improving fuel efficiency and reducing operating costs. Modern APUs are designed to be more fuel-efficient, contributing to overall fuel savings for airlines over the lifetime of the aircraft.
