According to our (Global Info Research) latest study, the global Available Resorbable Synthetic Barrier Membranes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In an effort to overcome the need for a second operation for membrane removal, barrier membranes are also constructed from biodegradable materials. Using resorbable synthetic membranes additionally decreases the need for surgical intervention from inflammation of membranes as well. Advantages of resorbable membranes. The need for developing resorbable membranes as an alternative to non-resorbable membranes primarily arose to avoid an additional surgery for removal. Due to their integration within the tissue, these membranes require the addition of biocompatibility while maintaining their shape and material properties for weeks while in the wound site. Currently, clinicians use membranes made of Poly-Lactic Acid (PLA) and Poly-Glycolic Acid (PGA).
