Abstracts

Actuators in aircraft play a vital role for flight and control; often their operation ensures the safety of the aircraft and every passenger on board.

In the past, airplanes have been fitted with hydraulic actuators. Airline companies are beginning to fit airplanes with electric actuators, because of better technology and more reliability. These heavy-duty linear actuators are manufactured to stand up to high pressure, peaking sometimes above 5,000psi. Because they are very close to the ground at high speeds, they must be built incredibly strong so they are not damaged by debris that is kicked up by wheels.

Scope of the Report:

This report focuses on the Aviation Actuator Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America is expected to exhibit high growth over the forecast period. North-American Airlines is expected to invest in the redesigning process of international wide-body aircraft. Air traffic in Europe is expected to increase, requiring significant upgrading. Manufacturers in this region are aiming at emission free and fuel-efficient aircrafts with efficient aviation actuator systems.

The worldwide market for Aviation Actuator Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
