Aluminum is one of the most commonly used materials in aerospace applications. In fact, it's used in everything from aircraft fuselages to engine components. Aluminum is strong, lightweight, and corrosion-resistant, making it an ideal material for aerospace applications. Aluminum aerospace extrusions are aluminum alloys that have been formed into specific shapes using a process called extrusion. Aluminum alloys are well suited for this process because they can be easily heated and formed into the desired shape.

According to the IATA, the total volume of air passenger traffic in 2022 increased by 64.4% compared to 2021. Global passenger traffic for the whole year was 68.5% of pre-pandemic (2019) levels.
