# Abstracts

Lithium batteries are the latest evolution of battery power, offering several use cases for ship owners. Lithium-ion batteries can be used as backup power, supporting the operating profile of a ship, including maintaining Dynamic Positioning (DP) systems. They can enable ships to run in zero emissions mode, when batteries temporarily function as the only source of electricity. This limits GHG emissions, enabling ships to comply with strict port requirements and travel in environmentally controlled areas (ECA). Additionally, batteries can be used for "peak shaving", taking over from onboard generator sets to deliver the peak load of energy.

According to our (Global Info Research) latest study, the global Lithium Batteries for Electric Ships market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
