According to our (Global Info Research) latest study, the global Axial Component Insertion Machine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An Axial Component Insertion Machine is a type of automated equipment used in the electronics manufacturing industry for inserting axial components into printed circuit boards (PCBs). Axial components are electronic components with leads coming out of opposite ends; these leads need to be inserted into drilled holes on a PCB and then soldered, either manually or through a wave soldering process.

The axial component insertion process is quite distinct from other forms of insertion such as surface mount technology (SMT). These machines are designed to handle components like resistors, diodes, and capacitors with axial leads.
