## Abstracts

The global Axial Component Insertion Machine market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

An Axial Component Insertion Machine is a type of automated equipment used in the electronics manufacturing industry for inserting axial components into printed circuit boards (PCBs). Axial components are electronic components with leads coming out of opposite ends; these leads need to be inserted into drilled holes on a PCB and then soldered, either manually or through a wave soldering process.

The axial component insertion process is quite distinct from other forms of insertion such as surface mount technology (SMT). These machines are designed to handle components like resistors, diodes, and capacitors with axial leads.

This report studies the global Axial Component Insertion Machine production, demand, key manufacturers, and key regions.
