Abstracts

The global Axial Glass Sealed NTC Thermistors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Axial Glass Sealed NTC Thermistors are packaged in glass, mainly axial glass-sealed diode NTC thermistors. It is a heat-sensitive semiconductor resistor whose resistance value decreases as the temperature increases. The temperature coefficient of resistance is in the range of $-2\%/k$ to $-6\%/k$, which is roughly 10 times the temperature coefficient of metal resistance. Changes in resistance may be caused by changes in external ambient temperature or by self-heating due to current flow. Its various uses are based on this property.
