Abstracts

The global Axle Shaft Steel market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Rapid development of the transportation industry: With the rapid development of the global transportation industry, especially the rapid development of high-speed railways, heavy-haul railways, urban rail transit and other fields, the demand for axle steel continues to increase. As a key component of railway locomotives and vehicles, axles bear huge loads and impact forces. Therefore, axle steel is required to have sufficient strength and toughness, as well as good fatigue resistance.

Lightweight demand: With the increasing global requirements for energy conservation, emission reduction and environmental protection, lightweighting has become one of the important trends in the transportation industry. As one of the key components of railway locomotives and vehicles, axle steel's lightweight is of great significance to improving the lightweight level of the entire vehicle. Therefore, the development of lightweight and high-strength axle steel has become one of the important directions for the development of axle steel.
