Abstracts

The global Azilsartan Kamedoxomil API market size is expected to reach \$ 269 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Azilsartan Kamedoxomil API is a prodrug of a new generation of angiotensin II receptor antagonists (ARB class) used for the treatment of hypertension. Its structural feature is that it can improve oral absorption rate and be converted into the active ingredient valsartan in the body, thereby exerting a stronger antihypertensive effect. This active pharmaceutical ingredient belongs to the high-end cardiovascular API of multi-step organic synthesis, with complex production processes and high requirements for impurity control, crystal stability, and registration standards. It usually meets international pharmacopoeia standards such as USP/EP. In 2025, global Azilsartan Kamedoxomil API production reached approximately 123 MT, with an average global market price of around US\$ 1,468 per kg. The annual production capacity of azilsartan kamedoxomil API is 180 tons, with a gross profit margin of about 30%.

Upstream raw materials: indazole/imidazole heterocyclic intermediates; Medoxomil esterification reagent (key structural source); Potassium salt reagents (KOH, etc.); Organic solvents (DMF, acetonitrile, methanol); Catalysts and protective reagents.

Downstream: Mesartan potassium tablets (anti hypertensive).

Raw material costs account for 45% -60%; Manufacturing cost accounts for 15% -25%; Quality control and compliance costs account for 8% -15%; Environmental protection and safety costs account for 5% -10%; R&D and process optimization account for 5% -10%.

The active pharmaceutical ingredient of azilsartan kamedoxomil API belongs to the growth segment of high-end ARB generic drugs. Its market demand is driven by the stable growth of the global hypertension patient base, while benefiting from the trend of ARB drugs upgrading from older generation products such as losartan and valsartan to the new generation of highly effective drugs. The current market is still in the transitional stage of 'original research and development oriented imitation and mass production', and Chinese and Indian companies are gradually entering the commercial supply system. However, the overall competitive landscape has not been fully saturated, so the price and profit levels are higher than traditional sartan APIs. The core competitive points of the industry lie in registration access (DMF/ANDA), optimization of synthesis processes, and the ability to control large-scale costs. In the long run, it has stable demand and moderate growth potential, and belongs to the 'high-end upgraded raw material drug market in mature therapeutic fields'.
