## Abstracts

The global Azodi(2-methylbutyronitrile) market size is expected to reach \$ 115 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Azodi(2-methylbutyronitrile) (AMBN) is an oil-soluble organic chemical commonly used as a free-radical initiator in polymer polymerization reactions (such as acrylates, styrene, and polyvinyl chloride). It decomposes upon heating or exposure to light, generating free radicals that promote polymerization. It can also be used as a blowing agent for plastics and rubber.

Its production primarily relies on basic organic chemicals and fine chemical intermediates, with key raw materials including methyl ethyl ketone, sodium cyanide, hydrazine hydrate, and oxidizing agents. In 2025, global sales are projected to be approximately 4,500 tons, with an average market price of around \$18,000 per ton. The industry's gross profit margin is expected to be in the range of 15%–30%.

This report studies the global Azodi(2-methylbutyronitrile) production, demand, key manufacturers, and key regions.
