Abstracts

Bath salts are water-soluble, pulverised minerals that are added to water to be used for bathing. They are said to improve cleaning, enhance the enjoyment of bathing, and serve as a vehicle for cosmetic agents. Bath salts have been developed which mimic the properties of natural mineral baths or hot springs. Some bath salts contain glycerine so the product will act as an emollient, humectant or lubricant. Fragrances and colors are often added to bath salts; the fragrances are used to increase users' enjoyment of the bathing experience.
