Baby Genetic Screening is a testing service offered for infants and young children to identify inherited or congenital conditions that may not be clinically obvious but could affect health and development if untreated. It typically uses a blood or cheek swab sample to screen for selected genetic disorders or risk markers, then provides results that guide confirmatory testing, medical follow-up, and early interventions when needed. Depending on the program, it may be positioned as an expanded option beyond standard newborn screening and is often accompanied by genetic counseling to help families understand findings and next steps.
