Abstracts

A baby warming device is designed to keep the baby warm and provide from basic to a critical care facility in a closed or open environment. There are over 20 million premature babies born every year globally due to low birth weight and other pregnancy-related conditions. The baby warming device needs a constant electric supply and few devices are portable enabling newborns to be kept warm during transport to other emergency care centers. The infant warmer consists of three different parts: a sleeping bag, an electric heater, and a pouch of phase change material. Also, these devices have consistently shown a faster advancement in technology that provides a low-resource setting in remote primary healthcare facilities.

Scope of the Report:

This report focuses on the Baby Warming Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The global baby warming devices market is driven by increase in the rate of preterm births, complications related to pregnancy leading to increase in fetal & neonatal mortality rates, and high efficiency of these devices. However, high cost of these devices and lack of awareness about the pregnancy-related complications impede the market growth. In addition, growth in demand for the development of portable baby warming devices and proactive initiatives taken by government to improve maternal & child health in the developing economies provide lucrative opportunities for the market growth.

The worldwide market for Baby Warming Devices is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million

US\$ in 2017, according to a new GIR (Global Info Research) study.
