According to our (Global Info Research) latest study, the global Back Grinding Tapes market size was valued at US\$ 237 million in 2024 and is forecast to a readjusted size of USD 336 million by 2031 with a CAGR of 5.2% during review period.

BGT(Backside Grinding Tape) is used to protect the wafer surface during back grinding after the IC is formed on the wafer. Attached on the circuit surface, it prevents damages to the circuit surface and pollutions to the wafer surface and improves the grinding accuracy of the wafer. Especially, it can perfectly protect the wafer pattern surface and the chip during the manufacturing process with its excellent physical and chemical properties. With developments of jumbo-sized and thinned wafer and high-bumped wafer, the function required to the BG tape are (1) low contamination levels, (2) highly close contact to wafer-, and (3) easiness of peeling.

Japan is the largest market with about 41% market share. Southeast Asia is follower, accounting for about 15% market share.
