Abstracts

The global Back-up Pads market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Back-up pads improve the conditioning and sanding performance of power tools. They drive discs, sheets with coated abrasives to condition a surface. Some pads can function in wet and dry conditions and reduce the time taken to complete sanding, grinding and polishing jobs on both flat and contoured surfaces

Select models convert into soft polishing tools with the use of adapters, foam layers or buffing bonnets. Shock resistant back-up pads with built-in backing plates from elements such as fiberglass are used for grinding and blending weld beads, casting flash and metal parts. Back-up pads are employed in a variety of sanding and finishing jobs including polishing marble, granite or ceramics; sanding out automotive paint defects; and smoothing wood furniture and floor surfaces.

This report studies the global Back-up Pads production, demand, key manufacturers, and key regions.
