Abstracts

According to our (Global Info Research) latest study, the global Backflow Preventions market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A backflow prevention device is used to protect potable water supplies from contamination or pollution due to backflow.

In water supply systems, water is normally maintained at a significant pressure to enable water to flow from the tap, shower, or other fixture. Water pressure may fail or be reduced when a water main bursts, pipes freeze, or there is unexpectedly high demand on the water system (for example, when several fire hydrants are opened). Reduced pressure in the pipe may allow contaminated water from the soil, from storage, or from other sources to be drawn up into the system.

The Global Info Research report includes an overview of the development of the Backflow Preventions industry chain, the market status of Chemical Plant (Pressure Vacuum Breaker (PVB), Reduced Pressure Zone (RPZ)), Water-Supply Station (Pressure Vacuum Breaker (PVB), Reduced Pressure Zone (RPZ)), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Backflow Preventions.

Regionally, the report analyzes the Backflow Preventions markets in key regions.
