Abstracts

A backhoe loader, also called a loader backhoe, digger in layman's terms, or colloquially shortened to backhoe within the industry, is a heavy equipment vehicle that consists of a tractor like unit fitted with a loader-style shovel/bucket on the front and a backhoe on the back. Due to its (relatively) small size and versatility, backhoe loaders are very common in urban engineering and small construction projects (such as building a small house, fixing urban roads, etc.) as well as developing countries. This type of machine is similar to and derived from what is now known as a TLB (Tractor-Loader-Backhoe), which is to say, an agricultural tractor fitted with a front loader and rear backhoe attachment.

Scope of the Report:

This report focuses on the Backhoe Loaders in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The increasing environmental concerns, considerable growth in the residential construction sector, rapid population expansion and rise in gross household disposable incomes in the developed as well as developing economies are key factors contributing to the growth of market. The increasing environmental concerns and depleting fossil fuel reserves compel backhoe loader manufacturers to develop innovative technologies such as hybrid backhoe loaders. A recent rise in migration of families and individuals from rural to urban areas has been attracting investments toward the development of sustainable & smart cities. Such development entails the adoption of construction machinery such as tractor loader backhoes that facilitate the construction processes. the America dominates the market for backhoe loaders throughout the forecast period.

The increased demand for backhoe loaders in the region mainly depends on the rise in construction activities in the residential and non-residential sectors.

The worldwide market for Backhoe Loaders is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
