## Abstracts

Backlight module provides light source to the LCD panel , because the LCD itself does not radiate. In order to allow users can clearly see the picture on LCD displayer, we set up the backlight module to illuminate the LCD panel. From this, we can see the information on LCD display. Therefore, "Backlight Module" is one of the key components of the LCD panel. The backlight module is composed of the light source, light guide plate, optic films, and other mechanical parts. This report mainly focuses on backlight module for consumer electronics market.

According to our (Global Info Research) latest study, the global Backlight Module for Consumer Electronics market size was valued at US\$ 53940 million in 2023 and is forecast to a readjusted size of USD 62350 million by 2030 with a CAGR of 1.9% during review period.

The consumer electronics applications of backlight modules include terminal applications such as smartphones and tablets, computers, televisions, and digital cameras. Mobile phones are smart tools for people to communicate and entertain. Tablets are highly portable personal computer mobile devices that allow users to perform activities with their fingers or stylus instead of the traditional keyboard and sliding mouse. A computer monitor is also commonly referred to as a computer monitor or computer screen. It is the most important computer component besides the CPU, motherboard, memory, power supply, keyboard, and mouse. As the name suggests, it should be a display tool that displays certain electronic files on the screen through a specific transmission device and then reflects them to the human eye. Television refers to a device that uses electronic technology to transmit moving images and audio signals. It is mainly used in home scenes for people to entertain and spend time. The

growth in demand for downstream consumer electronics is driving the further development of backlight modules.
