LCP are a type of aromatic polymer. They are highly thermally resistant, chemically resistant, and chemically inert. They will be able to replace ceramics, composites, metals, and many other traditional materials due to their superior properties. They are particularly useful for electrical and mechanical parts due to their high strength and inertness. LCP connectors are highly desirable for use in various applications due to their associated advantages such as non-reactivity, inertness, and high resistance to fire. These features have made LCP connectors suitable for a wide range of traditional electric applications.
