## Abstracts

The backplane transceiver industry is expected to exhibit significant shifts owing to an increase in demand for high-speed, flexible units that are required to support the high amount of Internet-generated traffic. The copper-based transceivers are employing equalization flexibility in order to provide durable technology. Further, a growth in the video over IP, storage, mobile telephone backhaul, and Voice over IP (VoIP) market is boosting the demand for novel, high-speed backplanes.
