Abstracts

The global Backup Power Supply Module market size is expected to reach \$ 2322.7 million by 2029, rising at a market growth of 7.9% CAGR during the forecast period (2023-2029).

Companies across all industries are experiencing the need for cloud computing, hyperscale data centers and extensive colocation facilities. They started using digital transformation. Businesses across all industries are undergoing digitization, which has led to reliance on electronic devices to access and collect information about their business processes, increasing the reliance on reliable and continuous power supply. Businesses are out of power due to power outages or outages, unable to run business processes; subsequently, a guaranteed and reliable power supply must be available to overcome these issues. UPS provides continuity and reliability during power outages, saving ongoing work and protecting hardware. Despite the high demands of the IT industry, microprocessors and PC-based systems are still used in many industrial processes. They are fragile and sensitive to power outages. It stores work in progress, protects industrial hardware, and ensures continuity and reliability during power outages. A power outage lasting only a few seconds can disrupt industrial processes and cause major financial losses. As a result, most industries have started adopting advanced modular continuous power supplies and the increasing need for reliable and zero-outage blackouts is driving the market growth.

Backup power supply module is an electrical System that provides emergency power to a load when the input power source fails. Continuous Power Supply converts incoming AC to DC through a rectifier, and converts it back with an inverter. Modular Continuous Power Supply differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power

interruptions, by supplying energy stored in batteries, supercapacitor, or flywheels. The on-battery runtime of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment.
