Abstracts

According to our (Global Info Research) latest study, the global Bacterial Bioreactor market size was valued at US\$ 391 million in 2024 and is forecast to a readjusted size of USD 485 million by 2031 with a CAGR of 3.1% during review period.

Bacterial bioreactors are biological reaction equipment specially used for cultivating and amplifying bacteria. They optimize the growth environment of bacteria by precisely controlling conditions such as temperature, pH, dissolved oxygen, stirring speed and nutrient supply. The reactor usually has efficient gas exchange and mixing capabilities to meet the oxygen or other gas requirements required for bacterial metabolism. It is widely used in biopharmaceuticals (such as the production of antibiotics, enzymes and vaccines), industrial fermentation (such as the production of organic acids, amino acids and alcohols), and environmental governance (such as wastewater treatment and pollution degradation).
