Abstracts

Conjunctivitis is an inflammation of the conjunctiva - the clear membrane that covers the outermost layer of an eye and the inner surface of eyelids. Conjunctivitis is segmented into three major categories: infective (viral and bacterial), allergic, and irritant (chemical). Bacterial conjunctivitis is one of the most commonly observed eye problems across all age groups, generally caused by bacteria such as *Staphylococcus aureus*, *Moraxella lacunata*, *Haemophilus influenzae*, and others (e.g. *Chlamydia trachomatis*, *Proteus mirabilis*, etc.).

Scope of the Report:

This report focuses on the Bacterial Conjunctivitis Drugs in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The development of multi-drug resistant variants, which is resulting in the augmented use of drugs, is expected to boost market growth during the forecast period. Microbes such as *Streptococcus* or *Staphylococcus* are responsible for bacterial conjunctivitis. These microbes change themselves chemically to develop resistance to the drugs. Since this resistance develops due to the irrational use of antibiotics, it may lead to severe complications in the body of the patients. Patients are thus expected to take up more medications such as corticosteroids and higher doses of antibiotics for the treatment of such diseases. This augmented use of drugs like corticosteroids and antibiotics for the treatment of bacterial conjunctivitis will propel the prospects for growth in this market.

The growing genericization of antibacterial drugs has impacted the demand for branded drugs significantly. The generic versions of patented formulations, with almost same

efficiency as the latter, are easily available at much lower rates in the market. This has increased the sales volume, albeit at the cost of revenues. Many branded ophthalmic drug manufacturers have incurred huge losses due to the generic cannibalization in this market.

The rising prevalence of multi-drug resistant organisms (MDROs), triggered by wide usage of antibiotics, incorrect drug dosage, and inappropriate medications, has created serious challenges for the treatment of infections such as bacterial conjunctivitis.

Researchers across the world are working on discovering efficient drugs for these MDROs. However, the non-availability of effective medications in near future is likely to hamper the market's growth over the coming years.

The worldwide market for Bacterial Conjunctivitis Drugs is expected to grow at a CAGR of roughly -3.6% over the next five years, will reach 350 million US\$ in 2023, from 430 million US\$ in 2017, according to a new GIR (Global Info Research) study.
