Latex agglutination tests are used for the identification of bacteria isolated on culture media or for direct antigen detection in specimens. Latex agglutination test is an assay used clinically in the identification and typing of many important microorganisms. These tests use the patient's antigen-antibody immune response. This response occurs when the body detects a pathogen and forms an antibody specific to an identified antigen (a protein configuration) present on the surface of the pathogen.

Leading global players of bacterial latex agglutination test kits include Thermo Fisher, Bio-Rad, Gold Standard Diagnostics, BioMerieux and Cardinal Health.
