According to our (Global Info Research) latest study, the global Baculovirus Expression System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Baculovirus Expression System is a type of protein expression system that uses insect cells and baculoviruses to produce recombinant proteins. This system has become increasingly popular for the expression of eukaryotic proteins that are difficult to produce in other systems, such as bacteria or yeast. Baculovirus Expression System involves the insertion of a gene of interest into a baculovirus genome, which is then used to infect insect cells. The infected cells then produce large quantities of the recombinant protein, which can be purified and used for various applications, such as drug discovery, vaccine development, and protein structure analysis.
