Abstracts

The global Bag-On-Valve (BOV) Aerosol market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A bag-on-valve (BOV) aerosol is a type of aerosol spray dispenser that utilizes a bag instead of a traditional canister as the container for the product being dispensed. The bag is placed inside a larger canister under compressed gas pressure, separated by a valve that controls the release of the product. The compressed gas, usually nitrogen or compressed air, surrounds the bag, and when the valve is activated, the gas forces the product through the valve and out of the dispenser as a fine mist or spray.
