Abstracts

The global Baggage Handling Software market size is expected to reach \$ 1601 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Baggage handling software is a vital component of baggage handling systems in modern transportation hubs. Leveraging advanced computer technology and information technology, it achieves automated management and monitoring of the entire baggage process, from check-in, security screening, sorting, transportation, to delivery. This software typically includes multiple functional modules, such as baggage information entry, tracking and inquiry, sorting control, and transportation scheduling. Through these modules, staff can real-time understand the location and status of baggage, promptly respond to and handle anomalies, ensuring safe, accurate, and efficient baggage handling. Baggage handling software exhibits a high level of intelligence and automation. It can automatically recognize baggage tag information, match it with passenger information, and generate a unique baggage tracking code. During baggage handling, the software updates the baggage's location and status information in real-time and displays it to staff through a visual interface. Additionally, it automatically adjusts the operating parameters of sorting equipment based on baggage destinations and sorting requirements, achieving rapid and accurate baggage sorting. Furthermore, baggage handling software boasts powerful data analysis capabilities. It collects and processes vast amounts of baggage handling data, such as baggage volume, processing time, and anomaly rates, providing valuable decision support for hub operations and management.

The global baggage handling software market is poised to evolve toward greater intelligence, automation, digital twinning, and AI-driven predictive optimization. Future

software solutions will place increased emphasis on real-time tracking, cross-platform data integration, automated anomaly alerts, intelligent dispatching, and predictive maintenance; furthermore, they will be deeply integrated with flight, security screening, and self-service terminal systems to enable end-to-end visualized management and enhance operational efficiency.
