Abstracts

Baghouse filters are also termed as fabric filters or dust collectors. These are the devices manufactured for nearly any dust producing application by changing size and bag types. It uses envelopes, fabric filter tubes, or cartridges to capture or separate dust and other particulate matter. These are most effective air pollution control instruments that work by eliminating particles from the electrical production processes or gas stream of industrial processes. Baghouse filters are exclusively known to remove 99.99% stubborn submicron particles.

Scope of the Report:

This report focuses on the Baghouse Filters in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The popularity of hybrid electrostatic filters, rise in packaged food retail manufacturers, preservation of food products, and growing popularity of snack food products, frozen food products, and ready-to-cook food products are main factors contributing to the growth of market. One trend in the market is change in energy mix. The energy mix refers on the breakup of the primary energy sources in the final energy consumption in a given geographical region; these resources include fossil fuels like oil, natural gas and coal, nuclear energy, and renewable sources. The composition of the energy mix varies in every region and country, based on the availability of the above resources. The rising popularity of hybrid electrostatic filters is one of the latest trends that will contribute to the growth of this market in the coming years. Hybrid filters are manufactured with the combination of electrostatic precipitators (ESPs) and bag filters. Setting up a hybrid filter in the system enables the ESP to gather the maximum amount of dust particles that

includes both large and small particles. The emission from hybrid filters is much lower than fabric filters and ESPs. These factors ensure the demand for hybrid filters in the coming years, which will subsequently drive the growth of the baghouse filters market.

The worldwide market for Baghouse Filters is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
