The global Bainitic Ductile Iron market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Bainitic ductile iron is an anti-wear material mainly composed of bainite with a small amount of martensite and austenite structures. No precious metals are added during production, and only an appropriate amount of manganese and trace elements are added. The grinding balls produced from this kind of cast iron (referred to as cast iron grinding balls) have the advantages of low cost, good wear resistance, and simple process.
