Bakery Auxiliary Materials refer to a type of auxiliary ingredients used in the production of baked goods such as bread, cakes, and biscuits. In addition to basic raw materials such as flour, sugar, fats, and eggs, they are used to improve quality, stabilize structure, enhance flavor, or extend shelf life. In common categories, bakery auxiliary materials include leavening agents (such as baking powder and sodium bicarbonate, used to generate gas and make products expand), emulsifiers (which improve oil-water mixing), enzyme preparations (which improve dough structure and fermentation performance), and dough improvers (which enhance dough stability and handling properties).
