## Abstracts

The global Baking Fat and Margarine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Baking fat and margarine are both used as substitutes for butter in baking. Baking fat is usually made from hydrogenated vegetable oil and is solid at room temperature. It has a high melting point, making it suitable for baking applications where high temperatures are required. Margarine, on the other hand, is made from a combination of vegetable oils and water, and can be either solid or spreadable. It has a lower melting point than baking fat, making it more suitable for lower temperature baking applications like cakes and cookies.

This report studies the global Baking Fat and Margarine production, demand, key manufacturers, and key regions.
