The global Balancing Crane market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A balancing crane is a construction crane used to lift heavy objects in a balanced and controlled manner. It is equipped with a counterweight system that balances the load being lifted and allows the crane to move in a stable and controllable manner. Balanced cranes are typically used to lift heavy objects in narrow spaces where access is limited or traditional cranes cannot be used. They are also commonly used in the construction of high-rise buildings and structures. Installed on the building itself, they can lift heavy materials and equipment to different heights.
