According to our (Global Info Research) latest study, the global Ball and Roller Bearings market size was valued at USD 133990 million in 2023 and is forecast to a readjusted size of USD 214960 million by 2030 with a CAGR of 7.0% during review period.

A bearing is a machine element that constrains relative motion to only the desired motion, and reduces friction between moving parts.

Bearings are basically used in various types of machinery or equipment, ranging from agricultural equipment, auto parts, household machines to aerospace and defense equipment. Automobile industry needs: The automobile manufacturing industry is one of the main application areas of rolling bearings. Growth in automobile production and technological innovations in automotive engineering generally lead to increased demand for bearings. Aerospace Industry: The demand for high-performance bearings in the aerospace industry is very high as they have to withstand extreme environmental conditions. Aerospace projects and demand from airlines have a positive impact on the rolling bearing market. Energy industry demand: Rapid growth in the energy sector, including wind and solar power, is also putting demand pressure on rolling bearings, as these industries require large numbers of bearings to support the rotating parts of equipment. Infrastructure Construction: Infrastructure construction projects, such as large bridges, buildings and public works, often require large numbers of bearings to support and control rotational motion. Since the past few years, the demand for bearings with higher efficiency, less maintenance and longer service life has been increasing.
