Abstracts

The global Ball Screws for Aerospace market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Aerospace ball screws refer to transmission devices specifically used in the aerospace field. They are similar to general ball screws, but are more stringent in design and manufacturing to meet the high requirements of aerospace engineering.

Ball screws for aerospace use have the following characteristics:

Lightweight design: The aerospace field has very strict weight requirements, so aerospace ball screws usually use lightweight materials and carry out structural optimization design to minimize weight.

High reliability: Ball screws used in aerospace need to have high reliability and long life, and can work stably in extreme environments and harsh conditions. Therefore, they have strict requirements in terms of material selection, processing technology, surface treatment, etc.

High precision: The aerospace field has very high precision requirements for motion control. Ball screws used in aerospace usually have high precision and positioning accuracy to meet the precision control needs of aircraft.

Low friction: Ball screws used in aerospace need to have low friction and high efficiency to reduce energy loss and improve system efficiency to ensure energy conservation, environmental protection and long range of aircraft.

High temperature resistance and corrosion resistance: Since aerospace engineering often needs to work in extreme environments such as high temperature, high speed, high pressure, and corrosion, ball screws used in aerospace need to have good heat resistance, corrosion resistance, and wear resistance.

Ball screws for aerospace are widely used in aerospace engineering such as aircraft, spacecraft, rockets, and satellites, and are used in various aerospace equipment such as flight control systems, door opening and closing mechanisms, landing gear controls, and solar panel rotation mechanisms. and systems, undertaking important motion transmission and position control tasks.
