According to our (Global Info Research) latest study, the global Bamboo Activated Carbon market size was valued at US\$ 142 million in 2024 and is forecast to a readjusted size of USD 223 million by 2031 with a CAGR of 6.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Bamboo activated carbon is a carbonaceous adsorption material with developed pore structure, large specific surface area and strong selective adsorption prepared by activation process with bamboo (charcoal) as the basic raw material. It is widely used in the refining and purification process of military industry, food, metallurgy, chemical industry, environmental protection, hospital and other industries. Bamboo activated carbon is the fourth type of activated carbon after coal activated carbon, wood activated carbon and coconut shell activated carbon. In recent years, with the strengthening of environmental protection, the improvement of food safety standards and the rise of new energy batteries, the demand for activated carbon has increased, and it has become an indispensable and important product in life and industrial and agricultural production. Bamboo activated carbon is divided into powder and granular. The size less than 80 mesh (0.18 mm) is powdered bamboo activated carbon, and the subdivision specifications are expressed in mesh or mm according to its particle size. The size greater than 80 mesh is granular bamboo activated carbon, and the subdivision specifications are expressed in mesh or mm according to its particle size.
