Abstracts

According to our (Global Info Research) latest study, the global Bamboo Charcoal Spunlace Nonwoven market size was valued at US\$ 444 million in 2025 and is forecast to a readjusted size of US\$ 807 million by 2032 with a CAGR of 8.9% during review period.

In 2025, global sales of bamboo charcoal spunlace nonwoven fabric reached 115 million square meters, with an average selling price of US\$3.75 per square meter and a total production capacity of approximately 130 million square meters. This product is a nonwoven fabric made from natural bamboo fiber using a spunlace process with the addition of carbonized bamboo charcoal. It possesses excellent breathability, moisture absorption, deodorization, antibacterial properties, and is environmentally friendly and biodegradable. It is widely used in medical protective equipment, sanitary napkins, wet wipes, bedding, and air purification filter materials.

Upstream raw materials include bamboo fiber, bamboo charcoal powder, and spunlace process additives. Material consumption is relatively higher than that of ordinary spunlace nonwoven fabrics to ensure functionality. Downstream supply mainly consists of medical and health companies, personal care product manufacturers, and environmentally friendly material application scenarios. The gross profit margin is approximately 28%, higher than that of ordinary spunlace nonwoven fabrics, reflecting its functional added value.

In the future, with the popularization of green and environmentally friendly concepts, the growth in demand for medical and personal care products, and the expansion of the functional materials market, the bamboo charcoal spunlace nonwoven fabric market will

continue to expand. Business opportunities will be concentrated in the development of highly absorbent and deodorizing, antibacterial and protective, and biodegradable and environmentally friendly materials. At the same time, it can be combined with smart textiles and filtration materials to provide enterprises with long-term value-added and technological upgrading space.

The bamboo charcoal spunlace nonwoven fabric market is experiencing rapid growth, primarily driven by increasing demand for environmentally friendly, health-oriented, and functional materials. Natural bamboo fiber and bamboo charcoal materials possess biodegradable, antibacterial, deodorizing, and moisture-wicking properties, aligning with green and healthy concepts in personal care, healthcare, and home life.

Upstream supply of bamboo fiber and bamboo charcoal powder is relatively stable, but high-performance spunlace technology and functional additives remain technological barriers, impacting production efficiency and cost control. Downstream demand is mainly concentrated in medical protective equipment, wet wipes, sanitary napkins, bedding, and air purification filter companies, exhibiting strong demand for high-functionality and environmentally friendly products. Simultaneously, a market for personalized and customized products is emerging.

In the future, with the advancement of green environmental protection policies, the expansion of the functional textile materials market, and increased consumer awareness of healthy and environmentally friendly products, bamboo charcoal spunlace nonwoven fabrics will continue to develop towards higher added value, multi-functionality, and intelligentization, providing companies with new opportunities for R&D innovation, product differentiation, and market expansion.
