Bamboo is a fast-growing plant known for its strength, flexibility and renewability. It can be harvested in a relatively short period of time, usually three to seven years, making it an attractive alternative to traditional hardwood flooring materials that take decades to replenish. The manufacturing process of bamboo flooring involves harvesting mature bamboo stalks and processing them into individual strips. These strips are then laminated together with a strong adhesive to form a strong and dimensionally stable flooring material. The top layer, called the wear layer, consists of thin bamboo sheets that provide the visible surface of the floor.
