## Abstracts

According to our (Global Info Research) latest study, the global Bandpass Optical Thin Film Filters market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Bandpass Optical Thin Film Filters are optical filters that can utilize the interference of reflected light generated at the film interface to selectively transmit the specific wavelengths required. Compared to absorbing filters such as glass and gelatin, this filter limits the transmission band very narrowly and sharply separates the transmission band from the suppression band, resulting in extremely sharp contrast characteristics.
