Banking as a Service (BaaS) software is a financial technology platform that allows third-party developers, businesses, and organizations to build and offer banking products and services via APIs (Application Programming Interfaces). This model enables companies to integrate banking functionality into their own applications without needing to become fully-fledged banks themselves.

The Banking as a Service (BaaS) software market is currently experiencing rapid expansion, systematization, and compliance-driven growth. With regulatory requirements such as open banking and PSD2, and the increasing demand from fintech for fast, embeddable financial services, enterprises are increasingly embedding financial functions such as payments, accounts, KYC/AML, risk control, and credit into their own products via APIs. The market is focused on providing end-to-end API platforms, scalable microservice architectures, compliance and data security capabilities, and the ability to interface with core banks, parent banks, and clearing institutions. Vendors are trending towards offering flexible pricing based on usage or modularity, developer-friendly portals, and robust developer ecosystems.
