Abstracts

Scope of the Report:

This report studies the Banking Automation & Roboadvisors market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Banking Automation & Roboadvisors market by product type and applications/end industries. Until now, banks mainly have focused on using new technology as a shield, or as a means to cut cost, with a focus on the automation of back-office processes, advanced anomaly detection in transaction data for fraud-detection purposes, and similar cost-saving measures. With ROE (return on equity) for global banks under pressure from the increasing costs for regulatory capital, some banks are finally starting to take automation seriously.

Currently a lot of industry attention centers around chatbot solutions in retail banking. Chatbots are interesting from many perspectives but have to become better at understanding natural language. Most cognitive and conversational solutions still only operate in a few languages and don't perform well enough when they have to use a translation layer. A poor chatbot solution is neither progressive nor good for business. We can expect a major pickup in performance when all solutions operate natively across languages.
