The global Bar-wrapped Cylinder Concrete Pipe market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Reinforcement wound steel cylinder concrete pipe is a kind of pipeline with complex structure, which is usually used in large-scale water conservancy projects, traffic projects and urban infrastructure construction. It combines the advantages of steel tubes, steel bars and concrete, and has high strength and durability. The structure of this kind of pipeline generally consists of an internal steel frame, an outer steel cylinder and a middle concrete. The steel frame plays the role of reinforcement and support, the steel tube provides the outer shell of the pipe, and concrete is filled between the steel frame and the steel tube to strengthen and waterproof.
