## Abstracts

The global Bare Board LED Strips market size is expected to reach \$ 1.85 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

In 2025, global sales of Bare Board LED Strips reached approximately 2.5 million meters, with an average market price of about USD 0.5 per meter, an annual production capacity of roughly 2.8 million meters, and an industry-average gross margin of approximately 15%.

Bare Board LED Strips refer to LED linear light boards without external protective encapsulation, typically consisting of flexible or rigid PCBs populated with surface-mount LEDs and resistors. The exposed circuit structure allows the strip to be integrated into lighting fixtures, display backlights, or lighting modules. Compared with finished LED strip lights that include silicone or protective housings, bare board strips are mainly used as component-level modules for further assembly.

Upstream suppliers include LED chips and packages, PCBs (flexible or aluminum boards), driver ICs, resistors, power components, and soldering materials. Midstream processes involve SMT assembly, testing, and strip module manufacturing. Downstream demand comes mainly from cabinet and furniture lighting, commercial linear lighting, architectural decorative lighting, advertising light boxes, and display backlight systems, where lighting OEMs and integrators perform final product assembly.

This report studies the global Bare Board LED Strips production, demand, key manufacturers, and key regions.
