According to our (Global Info Research) latest study, the global Bare Die Shipping & Handling And Processing & Storage market size was valued at USD 741 million in 2023 and is forecast to a readjusted size of USD 1008.7 million by 2030 with a CAGR of 4.5% during review period.

Bare die is used in a broad array of industries, and markets, including aerospace, military, avionics, automotive and other high-end industries. Hence, bare die is a preferential choice of most of the design engineers and buyers. They provide various advantages such as promoting high levels of integration, reliable performance, and increased functionality. Integrated circuit (IC) manufacturers use bare dies to optimize their product designs for limited space and to innovate new packaging solutions.

The demand for shipping & handling and processing & storage products in North America is mainly driven by the high demand in the U.S. The Silicon Valley is the major consumer of bare dies as a large number of IC manufacturers are located in the region. Also, the increasing manufacturing of the electronics in the country is expected to drive the carrier products demand.

The advent of Internet of Things (IoT) is expected to boost the growth of semiconductor industry not just in France, but also across the world and is aided by the development in the areas of consumer electronics, automotive applications, energy-related applications, and other industrial applications.

Majority of the IC manufacturers outsource the die fabrication process to foundries. The presence of a large number of semiconductor foundries such as TSMC, UMC, and

Micron, in Taiwan, is the sole factor contributing to high semiconductor fabrication in the country and driving the demand for the silicon chip carrier products.
