According to our (Global Info Research) latest study, the global Barium Carbonate market size was valued at USD 363.6 million in 2023 and is forecast to a readjusted size of USD 455 million by 2030 with a CAGR of 3.3% during review period.

Barium carbonate, also known as witherite, is a chemical compound used in rat poison, bricks, ceramic glazes and cement. Barium carbonate has high demand from glass industry and gives luster and increase the refractive index of the glass.

The increasing demand for Barium carbonate drives the market. Barium carbonate is majorly used for manufacturing and glazing ceramic tiles since it acts as a crystallizing and matting agent which combines with specific colouring oxides to synthesise unique colours. A surge in the construction activities in the developing regions and the increasing use of tiles have influenced the market growth. Barium carbonate increases the refractive index and lustre of glass which makes it suitable for use in the glass industry. Apart from this, it is also used in the production of cathode ray tubes, optical glass, glass filters and borosilicate glass. Other factors such as increasing government expenditure on infrastructural activities, growing population, inflating disposable incomes and rising preference for a luxury lifestyle are bolstering the barium carbonate market growth across the world.
