According to our (Global Info Research) latest study, the global Barium Complex Grease market size was valued at US\$ 498 million in 2025 and is forecast to a readjusted size of US\$ 666 million by 2032 with a CAGR of 4.3% during review period.

Global barium complex grease production reached 3.05 million tons in 2024, with an average selling price of US\$152 per ton.

Barium complex grease is a grease that uses barium soap (such as barium stearate or barium 12-hydroxystearate) as the primary thickener. It forms a three-dimensional network structure through a chemical reaction with organic acids, inorganic acids, or compound additives. Its base oil, typically mineral oil, synthetic hydrocarbons, or esters, is embedded in the barium soap backbone through physical adsorption and chemical bonding, forming a colloidal system. This grease exhibits excellent extreme pressure, anti-wear properties, water resistance, and high-temperature stability (the dropping point is typically above 200°C). It is widely used in high-temperature, high-load industrial equipment bearings, gearboxes, and automotive chassis.

The global market for barium-based complex grease is showing a steady growth trend, and its development is driven by multiple factors: on the demand side, industrial automation upgrades, the rapid development of new energy vehicles and high-end equipment manufacturing are driving its application expansion in textile printing and dyeing, shipbuilding, precision machinery and other fields; on the supply side, synthetic oil-based products dominate, and companies are improving performance through nanotechnology, composite additives and green formulas, while reducing energy consumption through intelligent production.
