According to our (Global Info Research) latest study, the global Barium Sulfate for Chemical Fiber market size was valued at US\$ 143 million in 2025 and is forecast to a readjusted size of US\$ 194 million by 2032 with a CAGR of 4.6% during review period.

Barium sulfate, also known as barium white, is a white crystalline solid with the chemical formula BaSO_4 . It is almost insoluble in water and other traditional solvents, but soluble in concentrated sulfuric acid. The main component of barite is barium sulfate, which is a common barium ore. Chemical fiber grade barium sulfate is treated with a special organic coating, which has high whiteness, no impurities, uniform and narrow particle size distribution, excellent dispersibility, and no secondary agglomeration. It can be effectively dispersed in polyester systems, effectively improving the processing performance of polyester fibers, good temperature resistance, prolonging the use time of filters, reducing fiber breakage rate, improving fiber dyeability, spinnability, tensile strength, and enabling polyester chips and fibers to exhibit excellent optical properties. Mainly suitable for the manufacturing of synthetic polyester and plastic masterbatch.
